

In re: PVC Pipe Antitrust Litigation - End User Plaintiffs Estimated Settlement Class Members by State

Based on information currently available, it is estimated that there are at least the following number of class members by State for the first three categories of the End User Settlement Class (public water systems that purchased PVC Pipe for end use, including in connection with the treatment or supply of water; public wastewater systems that purchased PVC pipe for end use, including for the collection, disposal, or treatment of wastewater; and suppliers of public energy or electricity that purchased PVC pipe for end use, including in connection with the supply of electricity for public consumption). There may be additional potential class members in the United States, which it is estimated would be proportional to the counts below. With respect to the fourth category of the Settlement Class (purchasers of PVC Pipe that purchased from a seller who purchased the product indirectly from Defendants), while the number of class members is not currently known, it is estimated that each State's proportional share of End User Settlement Class members within the fourth category is likely to be the same as or similar to that State's share of class members in the Non-Converter Seller Purchaser Settlement Class, which is listed in a separate summary.
